Sampling Settings

Defining a sample ratio enables you to multiply metric values and get a more realistic graphical display of traffic. Regarding permissions, NetFlow users can see exporter sampling rules, while NetFlow administrators can manage them (add, edit or delete).

sFlow packet sampling

sFlow traffic export includes packet sampling. Packet sampling employs randomness in the sampling process. On average, 1 in every N packets is captured and analyzed.

In the case of the sFlow traffic, Sampling ratio settings will override the real sampling ratio (packet sampling) provided by sFlow in the received packet, and the metric values will be multiplied with the value defined in Settings. When sampling ratio is not specified for sFlow traffic in Settings, metric values will be automatically multiplied with provided sampling ratio. In the other words, it is not mandatory to set this property to sFlow exporters to see realistic traffic in the graphs.

Configuring rules

To configure sampling rules, go to blocked URL > Settings > NetFlow Settings > Sampling tab.

Patterns	Subsets	Subset Sets	End Users	TopN	Name	Reports	Approgator Filtering	Sampling	Configuration			
# AM												
			Experiero				849	is relie		Peckets ratio	Flews ratio	Action
Devision Cook	Beerlar_Doord [111111-4.251]						200					2 H
Experter_DecoleC (111 III.4.3)							290		288		241	88
Coperty, Not (10 100 250 26)							400		200		200	2 B
Departur_Mod 200 007 255 42							200		100		200	
Department of Cal	Departur_Ned (11111142.190)						300		258		258	2 B

To add an exporter sampling rule:

- 1. Click Add
- 2. Click Select and you will see all exporters grouped by their tags
- 3. Hold Ctrl key and select multiple exporters at once, or click on tag to select all exporters with
- the same tag 4. Enter sample ratios (Bytes, Packets and Flows)

Click Save
