

Linux RPM (CentOS) Update

1. If you want to update versions 4.0.0 or 4.0.5 to 4.2.1, we kindly urge you to first update to version 4.1.0 and then to version 4.2.1.
2. Application will not work if update is made after support period has expired. Make sure that your support has not expired before you start updating.
3. It is not possible to update NetVizura on free trial. If you want to extend trial period for one additional month, please request a new trial license.

Step-by-step guide

1. Check free space on disk with `df -h` command. If there is less than 8GB of free space on disk, delete some files to make at least 8GB available space on disk (easiest way is to delete old raw data files in archive which is usually located in `/var/lib/netvizura/flow/archive`)
2. Download the update package (assumed filename is `netvizura-x.y.z-linux-rpm.tgz`) to NetVizura server's `/tmp` directory
 `x.y.z` is NetVizura version number.
3. Execute `cd /tmp`
4. Execute `tar -xzf netvizura-x.y.z-linux-rpm.tgz`
5. Execute `./update.sh netvizura-web-x.y.z.war`
6. Refresh your browser (Ctrl + F5)
7. Check if the update is successful on NetVizura's license page: http://<netvizura_ip>:8080/netvizura/#settings/license

If downloaded from Internet Explorer, the filename would be `netvizura-linux-x.y.z-rpm.gz`.
