

Viewing Traffic Statistics

In this chapter you will find out what networks statistics are available to you and how to make the best use of it. Network traffic statistics are available in NetFlow Analyzer module.

This chapter covers:

- **Traffic Distributions (Top Talkers)** - how is network traffic statistics split by categories (such as hosts, conversations, QoS etc.).
- **Understanding Charts and Tables** - how to use charts and tables showing netflow statistic
- **Exporters and Interfaces Traffic Statistic** - how to view traffic statistics for exporters and their interfaces
- **Basic Traffic Patterns** - how to start analysing logical structures of network traffic, independent of the physical infrastructure.
- **Subnet Sets** - how to analyse statistics for group of Subnets (IP ranges) or smaller Subnet Sets.
- **Favorites** - how to manage frequently monitored nodes.
- **Details** - how to view additional information for a selected node.
- **Reports** - how to export traffic statistics to PDF file or schedule a report.
