Configuring NetFlow Export

In terms of NetFlow export, there are two basic types of network devices:

- **Exporters** - network devices capable of netflow statistics export (for instance routers or L3 switches).
- **Server** - the computer that collects netflow statistics from exporters. This is also the computer on which NetVizura NetFlow Analyzer is installed.

The following issues should be addressed regarding network devices configuration:

- Choosing Server Location
- Configuring NetFlow Export (Ingress vs. Egress)
- Choosing Exporters
- Configuring Cisco Devices
- Exporting Without NetFlow Capable Device (Mirroring to Daemon Server)
- Exporting to Multiple Servers
