

Inspecting Raw Data (Flow Records)

Raw Data files store flow records exported in a 5-minute interval.

Raw Data Tree groups Raw Data files in folders according to day/hour/minute. Selecting a node from the tree allows inspection of specific Raw Data files.

Inspecting Raw Data

To inspect Raw Data:

1. Go To **NetFlow > Raw Data > Files**
2. **Specify time period** in Time Window. The main panel and Raw Data Tree will show gathered files
3. **Select files** you want to inspect from the Main Panel (or alternatively, select a single file from Raw Data Tree)
4. Click **Show Selected**

[illegible]

Raw Data table shows flow records from the selected Raw Data file(s). Data can be filtered, grouped and sorted the by almost any field (source IP address, Bytes, Protocol etc.).

[illegible]

Clicking on **Names** button provides IP address resolution. If you move your mouse cursor over specific IP address you can see Whois information about that host.

[illegible]

In order to enable IP address resolution, your NetVizura server should have local or remote communication with DNS server (for Hostname) and Internet access (for Whois information).

Exporting Raw Data

Raw Data table can be exported as a CSV file in order to present captured netflow records as a report to a third party or for further analysis.

To export Raw Data, click on the the **Export** button in the upper right corner of the Raw Data Table.

Grouping, filtering and sorting the raw data table will affect the CSV as well. This will also make a CSV file much smaller.

Depending on the amount of data, export can last a couple of minutes

Depending on your browser settings, browser may ask you were to save the file or it will save the file to a default folder (usually **Downloads** folder). Some spreadsheet software may ask you which separator to use when opening the file - select **Comma**.
