SNMP request lasts too long

SNMP request can take too long if the number of SNMP request retries and timeout are set to high for the policy used to access the device.

Go to blocked URL **> Settings > Control Panel > SNMP Policies** and check the parameters **Retry** and **Timeout** for the policy used on the device. You can see witch policy is configured on the device by going to blocked URL **> Settings > Control Panel > Devices**.

> ⓘ For more information, go to chapter Configuring SNMP Policies.
