

How to know when the data migration is done?

Once the data migration from PostgreSQL to Elasticsearch database has been completed, the migration tool application will show you the following message:

```
Migration has successfully finished, it took [3s] to complete
IMPORTANT NOTE: Once you are assured that data have been migrated successfully, please visit:
Settings > NetFlow Settings > Configuration
to clean data in PostgreSQL
```

IMPORTANT NOTE: If you have both NetFlow Analyzer and EventLog Analyzer modules, please contact support@netvizura.com before clearing data from PostgreSQL.

After all data have been successfully migrated from PostgreSQL to Elasticsearch, we would recommend clearing all data from PostgreSQL database.

Before proceeding, be advised to make sure that all data were transferred in the right manner. Removing data from PostgreSQL **is done permanently**, so be careful when performing this action.
