Cleaning data from PostgreSQL

Login to the NetVizura application and go to **Settings**. Choose **Netflow Settings** and then go to the **Configuration** tab.

In the dropdown menu choose "**Yes**". Because this operation is highly sensitive and **irreversible**, you will be prompted to enter a password.

After you have entered the password, the removal of PostgreSQL data will begin. Removing data should take up to 15 seconds tops. In the meantime, while you're waiting, **don't refresh your browser** - stay on the same page and wait until the process has been completed. Upon the successful data removal, you will see a success message in the bottom right corner:

i		>
	PostgreSQL data have been successfully deleted	

When all data have been deleted, the option to clean data from PostgreSQL will no longer be visible in Settings:

X Settings	Patterna Subnots Subnot Sots Endlasers Te	opN Alarma Report	Aggregator Filtering	Sampling	Configuration
