"Others" entry in the charts and table (in gray) represents traffic not belonging to top-talkers. Only exception to this is the display of Subnets where "Others" entry represents all values that are matched to a traffic but not matched with any defined subnet for that traffic.

IP Address Resolution

In order to enable IP address resolution, your NetVizura server should have local or remote communication with DNS server (for Hostname) and Internet access (for Whois information).

For this reason, NetVizura provides IP address resolution (Hostname, Geo-location and Whois information) that significantly saves time, improves readability of the statistics and increases overall contextual awareness.

As you can see in the screenshot above, this end user had two bigger downloads at around 16h from two IP Addresses belonging organization Akamai Technologies, located in United States.
